

Alan Shabrandi

Senior Golang Backend Engineer

+98 991 158 2801 | alan.shabrandi@gmail.com | LinkedIn | Willing to relocate

PROFESSIONAL SUMMARY

Senior Backend Engineer and Go specialist with 6+ years of experience in distributed systems, scalable APIs, and cloud-native architectures. Strong foundation in full-stack development (React, Next.js) and spatial databases, with a track record of delivering reliable enterprise solutions for high-traffic platforms (50k+ DAU). Passionate about Clean Architecture, system observability, and incorporating AI-powered capabilities into robust backend environments.

TECHNICAL SKILLS

- Backend (Go, Microservices, Clean Architecture,DDD, CQRS)
- Databases (PostgreSQL, Redis)
- DevOps (Docker, CI/CD, RabbitMQ, Keycloak, Prometheus, Grafana)
- Frontend (TypeScript, React.js, Next.js, Redux)

WORK EXPERIENCE

Senior FullStack Engineer (Backend Focus) | Enterprise Document Management Platform

Mar 2022 – Present

snapdrive.cloud

- Architected the backend utilizing **Domain-Driven Design (DDD)** and **Clean Architecture** within a Modular Monolith pattern, establishing clear domain boundaries for long-term maintainability and scalable evolution.
- Engineered hybrid search and AI-powered document processing by integrating **PostgreSQL Full-Text Search**, **pgvector** for semantic retrieval, and OCR for Arabic/English documents.
- Designed asynchronous processing pipelines using **Redis-based background workers** and domain events to efficiently handle document indexing, AI operations, and automated workflows.
- Implemented **enterprise-grade security** and governance modules, including RBAC, LDAP/Active Directory integration, immutable document versioning, and comprehensive audit trails.
- Established automated CI/CD workflows encompassing architecture validation, linting, **Docker-based packaging**, and deployment automation for both SaaS and on-premise environments.
- Contributed to the frontend ecosystem by building an **offline-first PWA** using Next.js and TypeScript, ensuring reliable document access and seamless UX in low-connectivity environments.

Backend Developer (Go) | K. N. Toosi University of Technology

Sep 2020 – Feb 2022

K. N. Toosi

- Engineered robust backend services and RESTful APIs for a **Web GIS platform** using **Go and PostgreSQL/PostGIS**, seamlessly integrating OpenStreetMap datasets for complex map-based applications.
- Optimized spatial database performance by designing efficient data models and utilizing **advanced PostGIS features** to accelerate geospatial data retrieval and complex queries.
- Implemented high-performance spatial processing workflows to handle **large-scale geographic data**, geometry operations, and reliable location-based services.
- Collaborated closely with researchers and software engineers to translate complex geographic algorithms into maintainable, **production-ready backend components**.

MCI (Hamrah Aval)

- Built and scaled the frontend for a video streaming platform using React and Next.js, reliably supporting **50k+ Daily Active Users** while reducing page load times by **45%** through code splitting and lazy loading.
- Developed a **modular frontend architecture** for a B2B/B2C Cloud Storage platform, implementing SSO, file management, and a low-latency real-time chat system utilizing **WebSockets**.
- Enhanced mobile user experience by integrating **PWA capabilities**, including service workers and robust caching strategies, to enable seamless offline support across diverse devices.

SELECTED PROJECTS

Scribe — AI-Powered Git Commit Assistant

Go, TypeScript, Git Hooks, LLM APIs (OpenAI/Claude), VS Code API

GitHub VS Code Marketplace

- Developed a developer productivity tool using **Go** and **TypeScript** that analyzes staged Git diffs to automatically generate contextual and standardized commit messages.
- Engineered a high-performance **Go CLI core** and native Git Hook engine, implementing **SHA-256 diff caching** to eliminate redundant API calls and achieve near-zero latency.
- Architected a **multi-provider LLM integration** (OpenAI, Claude, Gemini, Ollama) and published a seamless **VS Code Source Control Extension** to enhance engineering workflows.

EDUCATION

K. N. Toosi University of Technology

B.Sc. in GIS Engineering
