

Alan Shabrandi

Senior Golang Backend Engineer

+98 991 158 2801 | alan.shabrandi@gmail.com | LinkedIn | Willing to relocate

PROFESSIONAL SUMMARY

Senior Backend Engineer and Go specialist with 6+ years of experience in distributed systems, scalable APIs, and cloud-native architectures. Strong foundation in full-stack development (React, Next.js) and spatial databases, with a track record of delivering reliable enterprise solutions for high-traffic platforms (50k+ DAU). Passionate about Clean Architecture, system observability, and incorporating AI-powered capabilities into robust backend environments.

TECHNICAL SKILLS

- Backend (Go, Microservices, Clean Architecture,DDD, CQRS)
- Databases (PostgreSQL, Redis)
- DevOps (Docker, CI/CD, RabbitMQ, Keycloak, Prometheus, Grafana)
- Frontend (TypeScript, React.js, Next.js, Redux)

WORK EXPERIENCE

Senior FullStack Engineer (Backend Focus) | Enterprise Document Management Platform

Mar 2022 – Present

snapdrive.cloud

- Architected the backend utilizing **Domain-Driven Design (DDD)** and **Clean Architecture** within a Modular Monolith pattern, establishing clear domain boundaries for long-term maintainability and scalable evolution.
- Engineered hybrid search and AI-powered document processing by integrating **PostgreSQL Full-Text Search**, **pgvector** for semantic retrieval, and OCR for Arabic/English documents.
- Designed asynchronous processing pipelines using **Redis-based background workers** and domain events to efficiently handle document indexing, AI operations, and automated workflows.
- Implemented **enterprise-grade security** and governance modules, including RBAC, LDAP/Active Directory integration, immutable document versioning, and comprehensive audit trails.
- Established automated CI/CD workflows encompassing architecture validation, linting, **Docker-based packaging**, and deployment automation for both SaaS and on-premise environments.
- Contributed to the frontend ecosystem by building an **offline-first PWA** using Next.js and TypeScript, ensuring reliable document access and seamless UX in low-connectivity environments.

Backend Developer (Go) | K. N. Toosi University of Technology

Sep 2020 – Feb 2022

K. N. Toosi

- Engineered robust backend services and RESTful APIs for a **Web GIS platform** using **Go and PostgreSQL/PostGIS**, seamlessly integrating OpenStreetMap datasets for complex map-based applications.
- Optimized spatial database performance by designing efficient data models and utilizing **advanced PostGIS features** to accelerate geospatial data retrieval and complex queries.
- Implemented high-performance spatial processing workflows to handle **large-scale geographic data**, geometry operations, and reliable location-based services.
- Collaborated closely with researchers and software engineers to translate complex geographic algorithms into maintainable, **production-ready backend components**.
